

Ventilation Grilles

ALSVF / ALSV

The estimated throw data is based on a free jet under isothermal conditions and is presented for a terminal velocity of 0.5m/s. Jet throws to a terminal velocity of 0.25m/s can be obtained by applying a factor of 1.5.

Selection

Throw data is based on a free jet under isothermal conditions and is presented for a terminal velocity of 0.5m/s.

Jet throws to a terminal velocity of 0.25m/s can be obtained by applying a factor of 1.5.

Noise data is presented in terms of sound power based dBA levels and is valid for supply and exhaust applications
